

Igor® Gateway Software System Requirements

The Igor Gateway Software is the heart of Igor’s on-premises control system. The software communicates bi-directionally with Igor nodes to control lighting levels for each space, as well as receiving incoming commands from sensors and other devices to improve occupant comfort and optimize energy savings. In addition, the software sends all recorded data and system configuration to the Igor Cloud Portal for backup and analysis.

For **Igor Gateway Software version 5.0.0 and higher** to operate effectively, please follow the system requirements in the table below.

Supported Browsers: Chrome, Firefox, Safari, and Edge

Item	Requirements		
Device Count*	< 500	501—5,000	5,001+
Processor	Intel i3-5-7-9/Xeon Families Dual core processor	Intel i3-5-7-9/Xeon Families Quad core processor	Consult with Igor
Memory	8 GB RAM	16 GB RAM	Consult with Igor
Hard Disk	5 GB free disk space required; 15 GB free disk space recommended. Solid-state drives (SSD) are highly recommended.		
Operating System	Windows 10 Pro 64-bit; Windows Server 2012 R2 x64; Windows Server 2016; or Windows Server 2019		
Network Interface Card	Any standard 10/100/1000 Mbps Ethernet compatible card		
Software**	Microsoft® SQL® Server Express 2017; Microsoft .NET Framework 4.7.2 or higher		

*Device count can include light fixtures, wall controls, relays, actuators, sensors (light, motion, temperature, etc.) and other device types.

**Effective with the 5.0.0 release, the Gateway Software Admin UI application is self-hosted; Internet Information Services (IIS) and the Microsoft .NET Core 2.1 Windows Server Hosting Bundle are no longer needed.

END.
