

Brightline Smart Tips

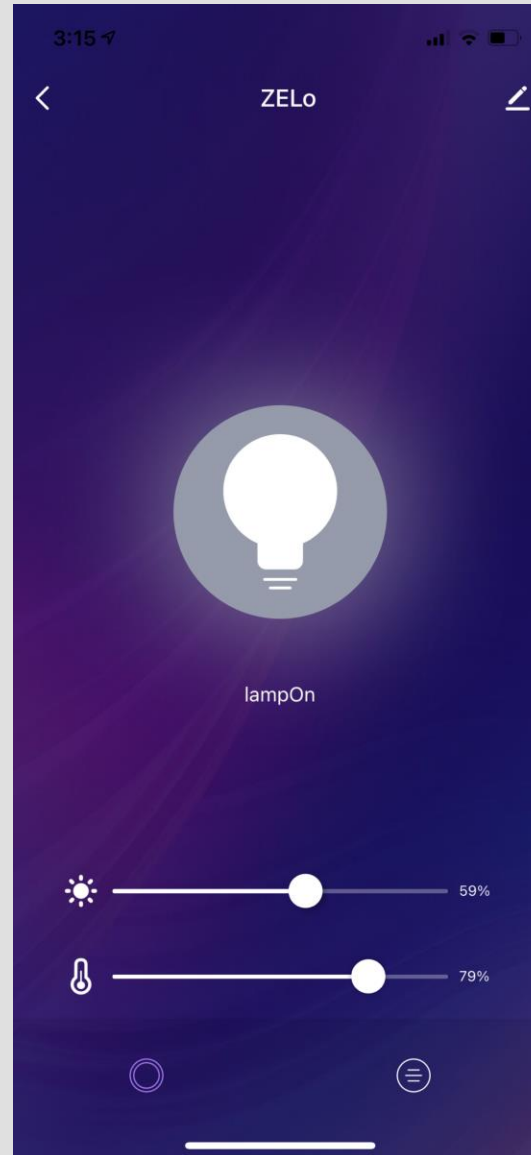

Quick Start Guide for
Programming your ZELo
Scenes & Cues

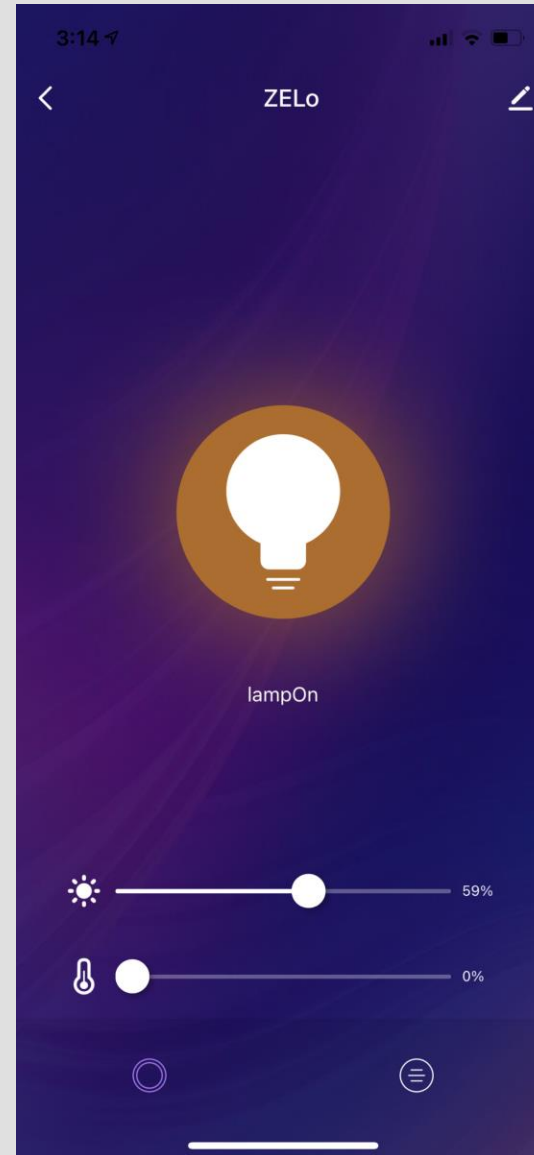

Press “power”
button to turn ZELo
on and it will turn
green.

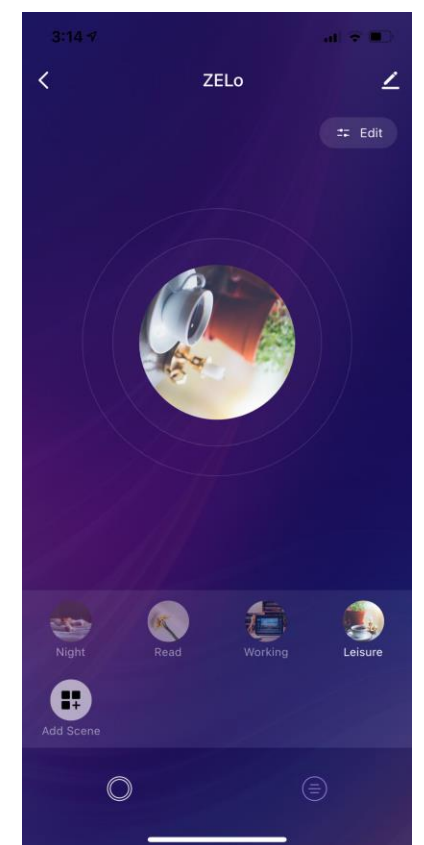

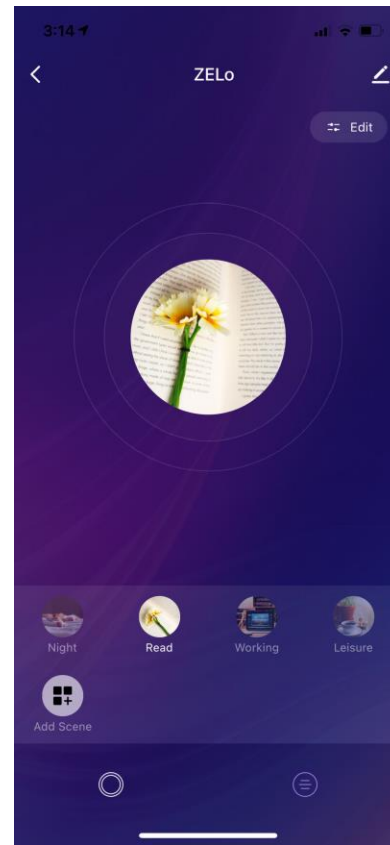

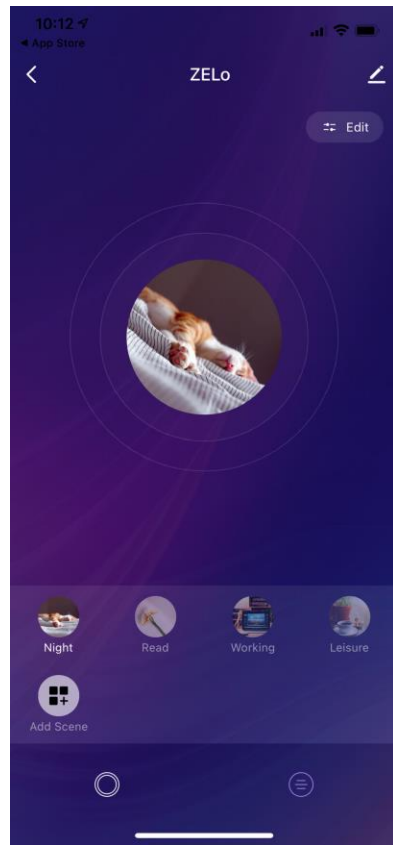

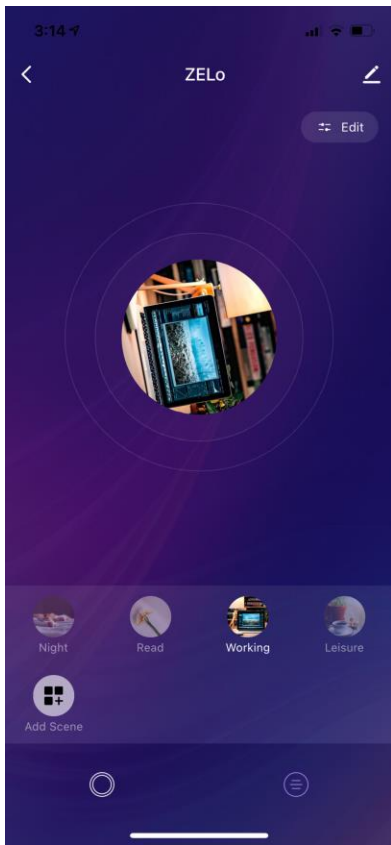

Tap ZELo photo
and this screen will
open. Tapping the
light bulb will turn
your ZELo on and
off.

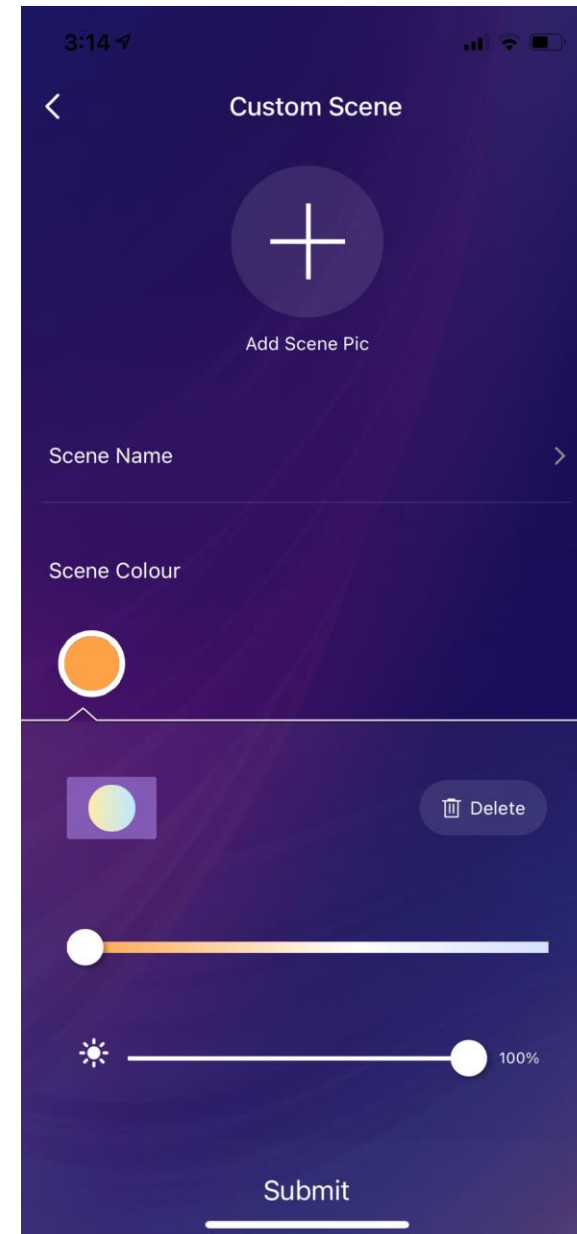

The sliders adjust ZELo intensity and color.

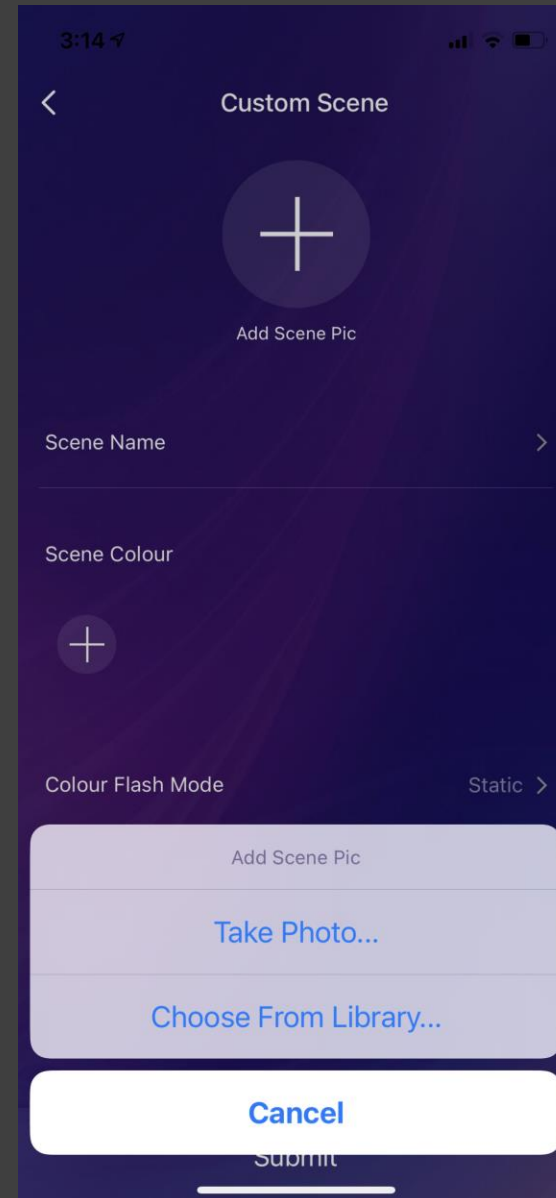

Tapping the line-filled circle on bottom right of screen will show factory pre-sets for standard scenes. Tapping on the various circle icons will change ZELo to that scene.

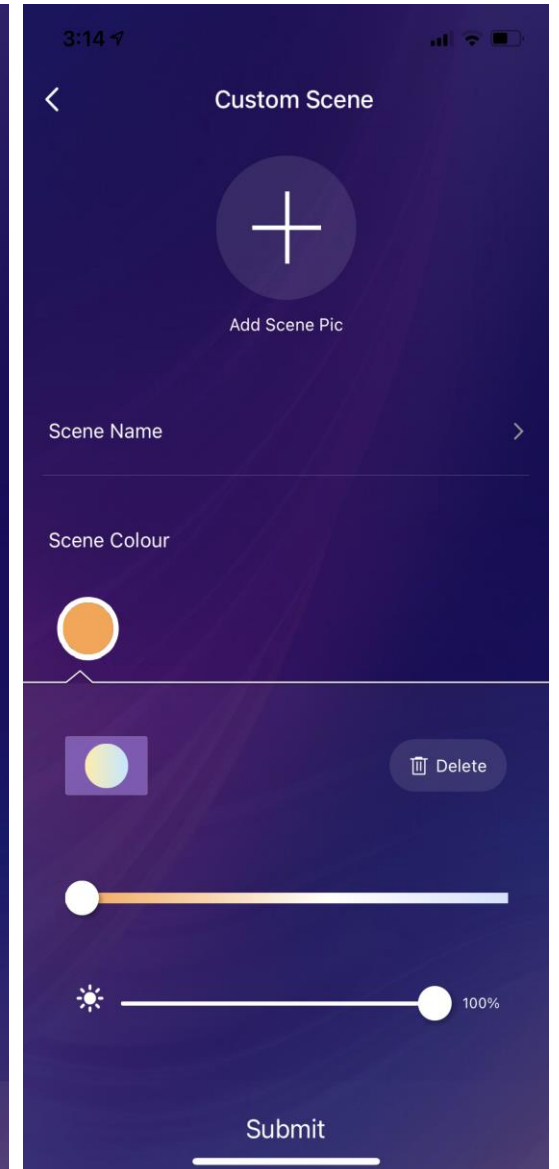

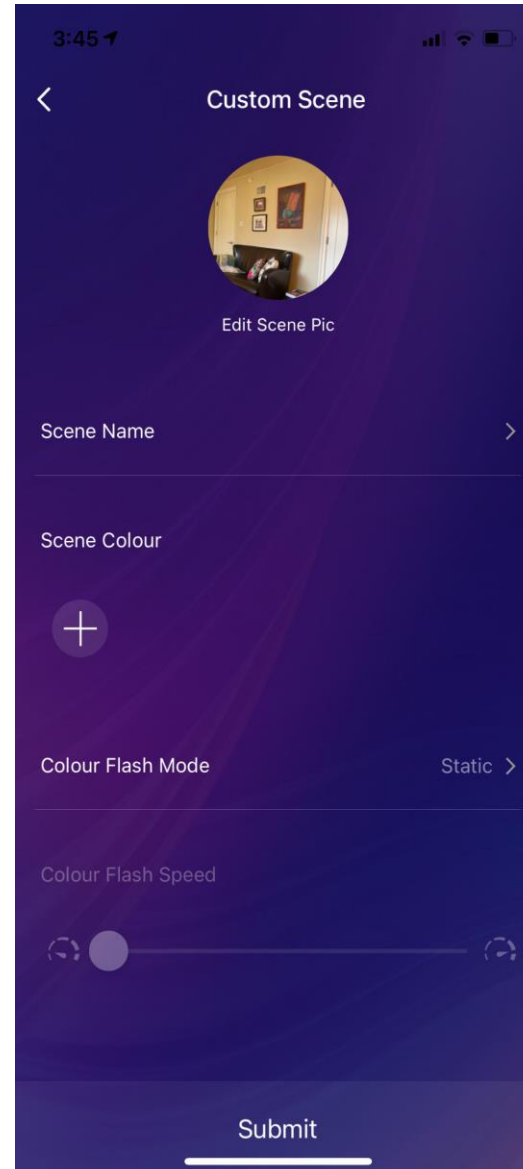

To create a custom scene, tap the “Add Scene” circle, then tap the + sign under “Custom Scene” to Add Scene Pic.

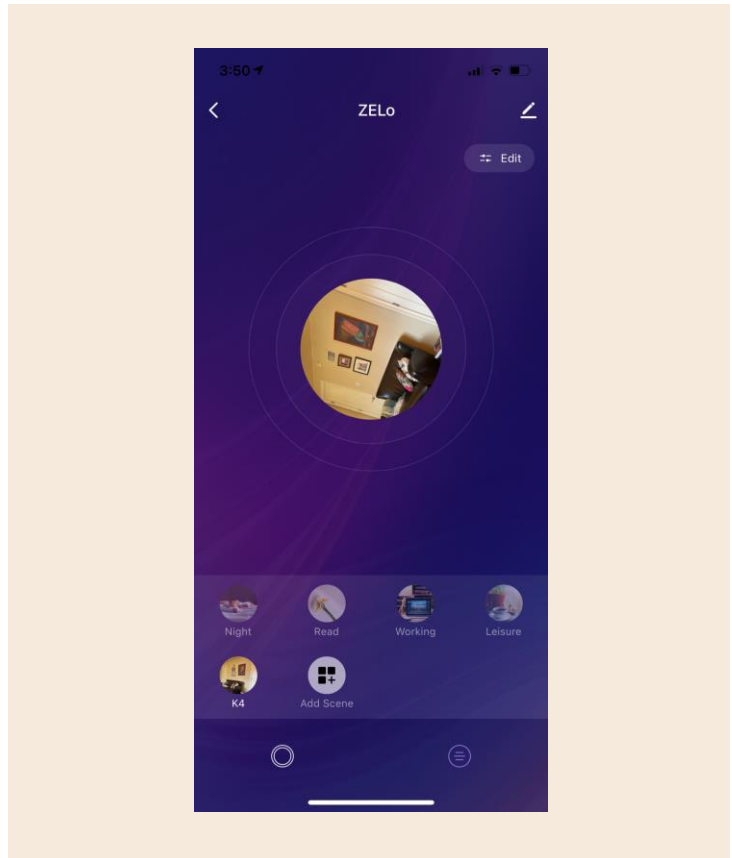

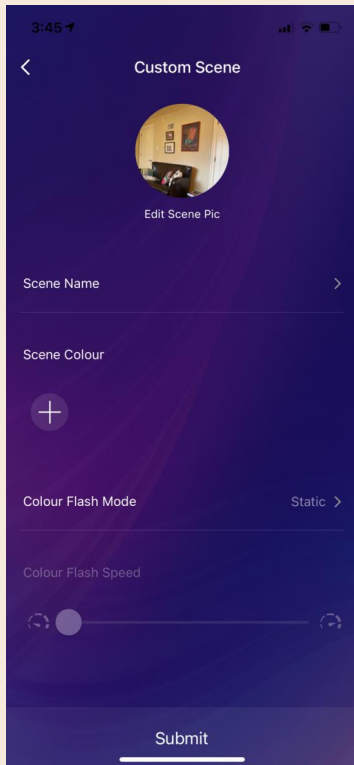

Take new photo or
choose from your
library and give
your scene a
name.

Allow App camera access, add photo, adjust level and color by selecting “Scene Colour” and name your scene. Select submit at bottom of screen.

Congratulations!
You have created
and stored your
first custom scene
with Brightline
Smart. Your scene
will now be stored
as a preset and can
be recalled by
tapping its circle.

Tap Pencil at top right hand-side of frame on any screen within Brightline to get this screen.

Here you can run automation with preset cues, authorize Third-party Control, and Create Groups.
